

Jeffrey Willett, PhD

Research Scientist, New York State Department of Health
Director, New York Tobacco Control Program

Jeffrey Willett, PhD, is a research scientist with the New York State Department of Health and director of New York's Tobacco Control Program. In his position, Dr. Willett is responsible for the development, implementation, evaluation, and dissemination of effective tobacco control and public health interventions in New York State.

Prior to joining the New York Department of Health, Dr. Willett served as the director of research and evaluation for the Ohio Tobacco Prevention Foundation, an agency charged with implementing statewide control programming in Ohio. Dr. Willett has also served on advisory committees for several national and state tobacco control organizations, including CDC's Office on Smoking and Health, Legacy, and the North American Quitline Consortium. He has a PhD in sociology, with a focus on the sociology of health, and an undergraduate degree in broadcast journalism, both from the University of Nebraska.
